Overview

This version release of ClearSkies™ EDR includes features and enhancements which empower the detection, response, and thus visibility of cyber, insider and third-party threats by utilizing Behavioral Monitoring and Analysis (BMA) which leverages ClearSkies™ advanced security analytics and Threat Intelligence.

What's New in v6.8

- **Working Remotely:** Supports the real-time collection and analysis of log and event data from workstations and laptops found outside the organization to enhance telemetry and thus visibility.
- **DHCP Support:** Avoid the confusion of the same workstations and laptops that have different IP address over time using the DHCP network management protocol.
- **Other Enhancements:** Enriched user experience and functionality.

Important Notes

Please refer to “New Features” and “Enhancements” sections for further information.

New Features

DHCP Support

- ClearSkies™ Endpoint uses the workstation's/laptop's hostname as a reference for the investigation process. Furthermore, the machine learning and artificial intelligence models will utilize the hostname through the analysis phase. As a result this enhances the transparency and visibility of who is who (work from home, bring your own device employees) using the DHCP network management protocol.

Out of Office

- ClearSkies™ Endpoint now forwards logs from out-of-office assets operating remotely from anywhere to the iCollector improving the visibility and monitoring of assets away from premises.

Enhancements

Settings

LogSource Policies Configuration

- “Windows Event Log Data” LogSource Configuration window design enhanced to improve user experience and scheduling of policies, and also through the portal.
- “SQL Server” LogSource Configuration window design enhanced to improve user experience and scheduling of policies, and also through the portal, upon agent upgrade.

Bug fixes

This version resolves a number of stability and performance issues identified.
